SUMMARY

Motivated Engineering/Technology student with a strong foundation in Data Science and Software Development. Skilled in Exploratory Data Analysis (EDA), Feature Engineering, and Machine Learning, with hands-on experience building and deploying intelligent data-driven solutions. Proficient in Data Structures & Algorithms (DSA) and Full Stack Development, demonstrating versatility across both analytical and software engineering domains. Eager to apply a diverse technical skill set in a challenging internship environment to deliver impactful, real-world solutions.

TECHNICAL SKILLS

- Languages: Python, C, C++, Java, JavaScript.
- Frameworks: Fast API, Flask
- Data Science: Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn
- Web: HTML, CSS, Tailwind, SOL
- Tools: Git, REST APIs, Model Deployment

WORK EXPERIENCE

Chief Technical Officer | Ecognix Technologies

January 2026 – March 2026

- Led the overall technical vision, architecture, and development strategy of an early-stage startup.
- Oversaw full-stack development, ensuring robust and scalable product delivery.
- Managed and implemented REST APIs, deployment pipelines, and core backend systems.

Social Intern | Mother Old Age Home, Hatigaon 7

July – 22 July

- Contributed to community welfare by assisting in daily care and engagement activities for elderly residents.
- Developed empathy, communication, and teamwork skills through hands-on social service.

PROJECTS

Forest Fire Weather Index (FWI) Prediction System | Tech: Python, Pandas, NumPy, Scikit-learn, Flask, Frontend

GitHub: <https://github.com/Biki989/FWI-prediction>

Vercel: <https://fwi-prediction-seven.vercel.app/>

- Developed an end-to-end **machine learning regression system** to predict Fire Weather Index (FWI) using meteorological inputs such as temperature, humidity, wind speed, and rainfall.
- Trained and evaluated a **Ridge Regression model** to handle multicollinearity and improve prediction stability.
- Built a **web-based interface** for real-time predictions and deployed the application using **Vercel**.
- Designed the system to simulate **real-world wildfire risk prediction use cases**.

Invoice Flagging Prediction System | Tech: Python, Pandas, NumPy, Scikit-learn, Flask, Frontend, sqlite3

GitHub: https://github.com/Biki989/Invoice_flagging_prediction

Vercel: <https://invoice-flagging.vercel.app/>

- Built a machine learning model to **detect potentially risky or fraudulent invoices** based on multiple financial and transactional features.
- Trained and compared models including Logistic Regression, Decision Trees, and Random Forest to optimize classification performance.
- Developed a **Flask-based backend API** to serve predictions from trained .pkl models. Applied feature selection techniques including correlation-based selection and Recursive Feature Elimination (RFE) to prepare data for ML models.
- Focused on building a **scalable ML workflow** including data preprocessing, feature engineering, model evaluation, and deployment readiness.

EDUCATION

B. TECH COMPUTER SCIENCE AND ENGINEERING

AUG 2024 - AUG 2028

Barak Valley Engineering College, ASTU
